PHANTOM

POWER SUPPLIES

Generates less noise than a mouse. (A dead one, that is.)

Plenty of companies claim that their power supplies are "quiet." Or "ultra-quiet." Or "virtually silent." And they may well be. But the simple truth is, our revolutionary Phantom is utterly, absolutely, undeniably silent. Its aluminum casing acts as a giant heatsink, which completely eliminates the need for any moving parts. And it boasts an impressive array of professional-grade features – such as dedicated voltage outputs, voltage-feedback circuitry, and dual +12V outputs – which allow it to provide 350 watts of reliable, stable, and literally silent power.

US UPC # : 761345-24350-6

Special Features:

- **Fanless design** ensures absolutely silent operation
- **Ultra-high-efficiency circuitry** (at least 85% efficiency) saves energy and reduces heat
- **Extruded aluminum casing** is directly attached to internal heatsinks, for maximum heat dispersion
- **Dedicated output circuits** for each voltage eliminate combined-output limitations
- **Advanced voltage-feedback circuitry** provides maximum system stability by ensuring accurate power delivery
- **Dual +12V output circuits** provide server-quality power
- **2 SATA connectors** to power Serial ATA drives
- **Server-grade protection features** ensure maximum reliability. Includes over-temperature, over-voltage, over-current, over-power, short-circuit and under-voltage protection
- **Gold-plated connectors** for superior conductivity
- **ATX12V v2.0 compliant** – compatible with current and newest generation of motherboards
- **AQ3** – Antec's unbeatable 3-year parts and labor warranty
